Assistive Touch IOS

Display an float button on your screen.
light but useful

The application ensures that users always have the best user experience by creating the perfect interface that other applications do not have. Besides screen recording, the application also features screenshots for users. Of course, screenshots can be taken while recording the screen simultaneously. It will be one of the best applications in ensuring the physical durability of the device as well as shortening operation time. Users only need to use some simple actions to move between different tabs to use all its features. The application also calculates the remaining time that the user can record with the current settings. Smartphone devices always have a lot of physical buttons around them, and if used many times, their effectiveness will be reduced to the level of being unusable. Things like adjusting the sound, locking the screen, or the home screen button are not needed. The variety of operations and uses not only makes the application smarter, but it also gives users a new experience for their device. The app will have some settings for locking the screen, such as tapping the screen at a tempo, shaking, or tapping the app's notification bar. This feature helps the physical buttons of the device have a longer life while keeping its sensitivity as the original. Screen Recorder is a convenient and easy-to-use feature, and it does not take up too much device performance every time the user activates. The layout and design of each tab will be different when one side is set to the screen lock range, while the other is screen settings as well as many other recording features. If you need an application that makes your device smarter, Assistive Touch would be a perfect choice. The variety of features and uses of this application is what makes it accessible and popular. Because everything is encapsulated in an application bubble menu, and it can be set as a bubble or notification bar. In other words, this app will be suitable for those who often record the screen during the game or save a certain moment. You can download Assistive Touch there with a FASTER DOWNLOAD SPEED. While holding the volume buttons will activate many other recording features of the application. But with this application, it is not possible, because users will never have to use physical buttons to manipulate the phone. Also, the application has many ways the screen will turn off, as well as an art style to help users have a better experience and appearance. If the user is busy or cannot access the application, the user can still use the physical button to perform some actions. Of course, after unlocking the screen, the user will have to enter a security password, and the application will also have many different security styles for users. Here are some notes: Please read MOD Info carefully to avoid mods not working To see CPU or GPU your device uses, check with the CPU-Z app Attention!!!! We replaced some download links to download Moddroid APK. MODDROID app has more complete contents than MODDROID websites. During screen recording, users can pause instead of stopping, which is a plus point of this application, and it has made many users happy and interested. The quality of the video can also be customized in the settings, thereby changing the size of the memory. Each of its interfaces alone is enough to make an impression on the first-time user. Holding the device's home button activates the screenshot. The interface is also intelligently designed with a great layout of functions and features. Screen lock is the most outstanding feature of this application, and it has some simple actions for users to lock, as well as unlock the screen. Now users will have an easier operation, smoother, more convenient, and can help extend the durability of the device as well as ensure their performance. Download APK You are now ready to download Assistive Touch for free. The application has a simple user interface, suitable for everyone, and it uses simple, harmonious, and friendly colors for everyone. For unlocking, users can use simple actions such as fingerprint scanning, touching the screen, or shaking.
